Obl	Compulsory
Opt	Optional
Fac/Comp/Opt	Facultative, compulsory or optional (according to the study programme)

SEMESTER

Sp	Spring
A	Autumn

The Master program has a normal duration of 3 semesters and comprises 90 ECTS :

- 15 ECTS : Module 1 (Compulsory courses + Optional courses)
- 15 ECTS : Module 2 (First step project)
- 15 ECTS : Module 3 (Compulsory courses + Optional courses)
- 45 ECTS : Personal research project (Master thesis)

Training objectives are available in its programme regulations.

Specific training objectives are described at the top of each track in the module 3.

Autumn Semester (semester 1)

MODULE 1	Courses / Enseignements	Hours per semester			Teaching Staff	ECTS Credits
		C	E/S	PW		
Compulsory / Obligatoire						
	Cardiovascular Diseases <i>Maladies cardiovasculaires</i>	20	4	-	Diviani D.	
	Cellular Biology <i>Biologie cellulaire</i>	12	4	-	Staub O.	
	From Memory to Memory Loss : Alzheimer's Disease <i>De la mémoire à la perte de mémoire : la maladie d'Alzheimer</i>	18	4	-	Volterra A., Cardinaux J.-R.	
	Immunology and Cancer <i>Immunologie et cancer</i>	20	12	-	Luther S.	
	Intracellular Signalling <i>Signalisation intracellulaire</i>	12	3	-	Diviani D.	
	Metabolic Diseases <i>Maladies métaboliques</i>	16	4	-	Widmann C.	
	Microbiology <i>Microbiologie</i>	18	4	-	Kunz S.	
	Scientific Method and Communication <i>Méthode et communication scientifiques</i>	8	2	-	Broillet M.-C., Kohler S.	
	MB Poster Day				Luther S.	
Optional / Optionnel						
	LTK1 Module : Training in Animal Experimentation * <i>Module LTK1 : expérimentation animale</i>				Broillet M.-C.	
	Introduction to Clinical Research Module (EH) <i>Module d'introduction à la recherche clinique (EH)</i>	20	-	20	Tappy L.	
	Total	144	37	20		15
MODULE 2	Practical project / Travail pratique					
	First Step Project <i>Travail d'initiation à la recherche</i>	-	-	282	Broillet M.-C.	15

* Only students who choose a master project with animal experimentation are allowed to select this course

- PW = Practical Work

BIOLOGICAL SECURITY

Patrick Michaux

C	Obl	English	2
A			

N: Master

P: A basic knowledge of microbiology and vegetal science

O: To familiarise future researchers with legislation concerning genetic engineering. In addition, possible biological risks associated to different applications of this technology will be discussed with the help of examples. This teaching is a mandatory prerequisite for First-Step.

C: * Legislation: article 24 of the Federal Constitution; law concerning environmental protection; law concerning epidemics; ordnance on protection against major accidents; Swiss commissions on biological security: notification and registration of projects.
* Biological security in the laboratory: containment; security equipment; technical measures: laboratory construction; standard laboratory (microbiological) practice; classification of biological material: plasmids, microorganisms, cell lines, primary cells; security levels 1-4.
* Release of genetically modified bacteria in the environment: monitoring, survival and dissemination, ecological impact, transfer of genes, containment systems.
* Potential biological risks associated with the use of transgenic plants: dissemination, cross-pollination, gene transfer.
* The problem of recombinant vaccines: vectors, DNA vaccines.
* Somatic genetic therapy I: Illnesses accessible to treatment by somatic genetic therapy, gene transfer methods.
* Somatic genetic therapy II: Evaluation of the biological risk for the patient and his environment.

CARDIOVASCULAR DISEASES

Dario Diviani

C	Obl	English	20
A			
S	Obl	English	4
A			

N: Master

O: Integrated overview of the respiratory and cardio-vascular systems
Introduction to cardiac and respiratory pathophysiology, pathology, and pharmacology
Cellular mechanisms of selected cardiovascular and respiratory diseases

C: respiratory and cardiovascular physiology
respiratory and cardiovascular pathophysiology and pharmacology
cellular basis of arterial hypertension
cellular basis of heart failure
heart conduction defects (problem-based learning)

B: Medical Physiology. W F Boron & E L Boulpaep; Saunders 2003

CELLULAR BIOLOGY

Olivier Staub

C	Obl	English	12

INTRACELLULAR SIGNALLING

Dario Diviani

C	Obl	English	12
A			

S	Obl	English	3
A			

N: Master

P: Bachelor in Biology

O: Introduction to the hormonal system. Physiological, pathophysiological and pharmacological aspects

- C: 1) Signal transduction by peptide hormones (G protein-coupled receptors, second messengers, protein kinases, genetic pathologies, pharmacological targets).
2) Receptor-mediated endocytosis (transferrin, LDL, toxins, virus, ligand-targeted therapeutics)
3) Signal transduction by steroid hormones (mechanism of action, pathologies, pharmacological targets)

B: - Endocrinology: An Integrated Approach.

Nussey, S.S.; Whitehead, S.A. London: Taylor & Francis; c2001

- Molecular Biology of the Cell 4th ed.

Alberts, Bruce; Johnson, Alexander; Lewis, Julian; Raff, Martin; Roberts, Keith; Walter, Peter, New York and London: Garland Science; c2002

METABOLIC DISEASES

Christian Widmann

C	Obl	English	16
A			
S	Obl	English	4
A			

N: Master

P: The following metabolic pathway should be known beforehand:

- Glycolysis
- Neoglucogenesis
- Glycogen synthesis
- Fatty acids and triglyceride synthesis
- Krebs cycle

The basic regulation of receptor tyrosine kinases, G protein-coupled receptors, small GTP-binding proteins should also be known.

O: The objectives of this course is to understand the complex aetiology of diabetes by studying the environmental, genetic, and molecular factors underlying the development of the disease

- C:
1. Physiopathology, genetic and environmental factors in diabetes.
 2. Epidemiology of and complications in diabetes.
 3. Diabetes: a pancreatic beta cell disease.
 4. Diabetes: an insulin-resistance disease.
 5. Genetics of diabetes

MICROBIOLOGY

Stefan Kunz

C	Obl	English	18
A			
S	Obl	English	4
A			

N: Master

P: Course Virology B.Sc. 5th semester (Kunz) or equivalent

O: This course will provide an overview over medical microbiology at an advanced level. Introductory parts will cover the basic concepts of bacterial, viral, and fungal infections in humans. Selected pathogens will be used to highlight the principles underlying human infectious diseases from the standpoint of the pathogen and the host defense.

C: Outline course Medical Microbiology

Part I Medical Bacteriology (Gilbert Greub, 6 hours total)

This part of the course will first present the concepts of bacterial colonization, of infection and of barriers against invading micro-organisms. The importance of clinical bacteriology for the etiological diagnosis of infectious diseases will be presented, as well as the main diagnosis approaches used. Then, the most important virulence factors implicated in bacterial pathogenesis and in the transmission of pathogenic agents will be presented. These fundamental principles will be illustrated using relevant human pathogens as examples. First, we will present the pathogenesis of some pyogenic bacteria (*Escherichia coli*, *Staphylococcus* spp., *Streptococcus* spp.), highlighting the importance of bacterial toxins and of bacteriophages. Then, we will present some specific aspects of the mode of transmission and pathogenesis of infections due to intracellular bacteria, using as examples the atypical pneumonia and the zoonotic infections. Finally, we will illustrate using mycobacteria some key principles in bacterial pathogenesis including the importance of pathogens evolution and of immune defense.

Colonisation, infection and barriers against invading pathogens (1hour)

Colonisation, physiological flora

Infection and inflammation

Chemical, mechanical, physical and biological barriers

Diagnostic bacteriology (1hour)

Gram and direct examination

Cultures approaches

Bacterial identification

Molecular diagnosis/serology

Pyogenic bacterial infections and toxins (1hour)

Escherichia coli: commensal and pathogen: (ETEC/EPEC/EIEC)

Staphylococcus aureus: virulence factors

Streptococcus, superantigens and bacteriophages

Pneumonia (1hour)

Etiological diagnosis of pneumonia

Pneumococques and other encapsulated pyogenic bacteria

Legionella pneumophila, water and amoebae

Other agents of atypical pneumonia (*Chlamydia* spp., *Coxiella burnetii*)

Zoonotic infections (1hour)

Ticks/fleas/lice: role in the transmission

Rickettsia: pathogenesis and reductive evolution

Bartonella: red blood cells and endothelial cells

Mycobacteria (1hour)

Importance of immune defense mechanisms

Pathogenomic with an evolutionary perspective

Part II Medical Virology

This part of the course will cover fundamental aspects of medical virology and viral diseases in humans. A short introduction will provide a survey of the landscape and outline basic principles of human viral infection and viral pathogenesis. These fundamental principles will then be illustrated using relevant human pathogens as examples. The most important families of human pathogenic viruses will be presented in a general way. From each family, we will select specific viruses that will serve as examples to illustrate fundamental aspects of virus-host interaction and viral pathogenesis in a more detailed manner. A final block will cover virus infections in the central nervous system (CNS) and re-visit the basic principles outlined before to give a synthesis of the highly complex virus-host interaction underlying viral CNS disorders.

Introduction to medical virology (1 hour) Stefan Kunz

Basic principles of human viral infection

Basic principles of innate and adaptive anti-viral defense

Virus infection of the central nervous system (1 hour) Stefan Kunz

Mechanisms of CNS invasion by viruses

Anti-viral immune defense in the CNS

Acute viral infection of the CNS: meningitis and encephalitis

Persistent viral infection in the CNS

Infection of the developing CNS: virus infection in pediatric medicine

Human pathogenic DNA viruses (2 hours) Stefan Kunz

Overview human pathogenic DNA viruses

Poxviruses

Overview poxviruses

Pathogenesis of smallpox

Subversion of innate host cell immunity by poxviruses

Adenoviruses

Adenoviruses as human pathogens

Herpesviruses

Overview human pathogenic herpesviruses

Herpes simplex virus and viral latency

Epstein-Barr Virus: viral latency and cancer

Human pathogenic RNA viruses I (1 hour) Stefan Kunz

Overview human pathogenic DNA viruses

Enteroviruses

Overview human pathogenic enteroviruses

Rhinoviruses and cosackievirus: viral tropism and pathogenesis

Paramyxoviruses

B: Will be provided for each block.

SCIENTIFIC METHOD AND COMMUNICATION

Marie-Christine Broillet

C	Obl	English	8

A			

N: Master

LTK1 MODULE : TRAINING IN ANIMAL EXPERIMENTATION

Marie-Christine Broillet

C	Opt	English	20
A	1.50		
TP	Opt	English	20
A			

N: Master

O: Learning outcomes

To acquire the practical and theoretical skills with laboratory animals as requested by legislation (Swiss ordinance N° 455.171.2, October 1998) to get the accreditation to perform animal experimentation delivered by the Federal Veterinary Office.

This course (20h theory + 20h practical) will be recognized by the Swiss federal veterinary office to undertake animal experiments.

C: What is animal experimentation?

Any interventions in which live animals are used to :

- Test a scientific hypothesis in various fields (behavior, neurology, metabolism, immunology, cardiovascular...)
- Verify the effects of a particular procedure on an animal
- Test a substance (pharmacology, toxicology...)
- Collect or examine cells, organs or body fluids
- Education, training and continuing education

Choosing an appropriate animal model

- Before an animal model is chosen, investigators must consider alternatives to the use of live animals (3Rs)
- Investigators must consider all factors when selecting the best model for research

Who is concerned by this module?

This training module is relevant to all students working with animals during their master project.

Conditions for registration to this module:

- The host laboratory must have permission to work with animals
- Students must be announced to the cantonal veterinary office

INTRODUCTION TO CLINICAL RESEARCH MODULE (EH)

Luc Tappy

C	Opt	English	20
A			
TP	Opt	English	20
A			

N: Master

O: To get acquainted with basic methods in clinical research

- o study design
- o statistical analysis
- o ethical considerations
- o legal aspects

To know the basic skills for the realization of research protocols on human beings

- o Techniques of asepsy, iv drips
- o how to react in case of acute adverse effects
- o basic life support

To understand the relationships between clinical practice and research

- o cancer
- o metabolic disorders
- o neuro-psychiatric disorders

FIRST STEP PROJECT

Richard Benton, Marie-Christine Broillet, Jérôme Goudet, Antoine Guisan, Laurent Lehmann,
Marc Robinson-Rechavi

A	15.00		
TP	Obl	English	224
A	15.00		

N: Master

P: Practicals performed during the bachelor (molecular biology, genetics, biochemistry, bioinformatics)

O: - An initiation to the work of a scientist
 - Conduct experimental work in research lab (wet bench or in silico)
 - Interpretation of research results
 - Implement basic principles in experimental design (e.g. include the appropriate controls, statistical significance of the results etc...)
 - Present your experimental work in a written report which will be organized like a typical research article (introduction, results, discussion, materials and methods)
 - present your work orally (seminar style)

C: Perform laboratory work for about 12 weeks during the time when the student does not follow theoretical classes. This research project will typically be performed under the guidance of a PhD student or a post-doc from the host laboratory.

Spring Semester (semester 2)

One track among the following four / Une filière au choix sur les quatre :

Immunology and Cancer <i>Immunologie et Cancer</i>				Responsible: Luther S.
MODULE 3	Courses / Enseignements	Hours per semester	Teaching Staff	ECTS Credits
		C E/S PW		
	Introduction to Clinical Medicine <i>Introduction à la médecine clinique</i>	16 - 6	Bonny O.	
	Immunology II. Advanced Concepts in Immunology : from Antigen Recognition and Signalling to Leukocyte Responses <i>Immunologie II. Concepts avancés en immunologie : de la présentation et reconnaissance d'antigène à la signalisation et aux réponses des leucocytes</i>	22 4 -	Luther S., Held W., Tacchini-Cottier F., Thome M., Ho P.-C.	
	Immunology III. Immunity and Disease : Microbiome, Infections and Autoimmunity <i>Immunologie III. Immunité et maladie : Microbiome, Infections et Autoimmunité</i>	19 4 -	Broz P., Velin D., Perreau M., Roger T., Pot C., Jandus C.	
	Cancer II. Advanced Concepts in Cancer Biology : from Genetics and Epigenetics to Metabolism <i>Cancer II. Concepts avancés en biologie du cancer : De la génétique et épigénétique au métabolisme</i>	10 1 -	Fajas L., Hanahan D., Riggi N., Missaglia E.	
	Cancer III. Advanced Concepts in Cancer Biology : from Angiogenesis to Tumor Invasion and Metastasis <i>Cancer III. Concepts avancés en biologie du cancer : de l'angiogenèse à l'invasion tumorale et au métastases</i>	12 4 -	Petrova T., Joyce J., Gfeller D., Doucey M.A.	
	Treatments. Treatments and Prevention of Disease : Drug Development, Vaccines, Anti-Tumor Immunity, Immunotherapy, Leukemia, Transplantations, Allergies <i>Traitements. Traitements et prévention de maladies : Développement de médicaments, vaccins, immunité contre tumeurs, immunothérapie, leucémies, transplantations, allergies</i>	22 6 -	Romero P., Kandalait L., Vozneni M.-C., Arber C., Collin N., Nardelli D., Golshayan D., Comte D., Knezevic I.	
	Proteomics and 3D Modeling. Applications to the Study of Lymphocytes and Tumor Cells. <i>Protéomiques et modélisation en 3D. Applications à l'étude des lymphocytes et cellules tumorales.</i>		Quadrone M. Servis C., Zoete V., Baumgartner P., Jandus C., Dere L.	
	- Lectures on Proteomics - Cours ex-cathédra sur la protéomique	17 - 32		15
	- PW Proteomics : Immunological Assays based on Peptides and Mass Spectrometry - TP Protéomiques : tests immunologiques basés sur peptides, spectrométrie de masse			
	- PW 3D-Modeling - TP modélisation en 3D			
	PW Immunology/Cancer : - TP Immunobiologie/Cancer : - Histological Analysis of Lymph Nodes or Cancer Tissues - Multicolor Flow Cytometric Analysis of Lymphoid Organs - Discussion and Feedback Session		Luther S., Wilson A., Nobile A.	
	- Analyse histologique des ganglions et tissus cancéreux - Cytométrie de flux en multiples couleurs pour analyser des tissus lymphoïdes - Discussion et session 'feedback'	8 3 28		
	E-Learning Exercises. Article and Case-based Learning in Proteomics / Immunology / Cancer <i>Exercices de type 'e-learning'. Apprentissage par article ou problème en protéomiques / immunologie / cancer</i>	1 6 -	Luther S., Debard N., Quadrone M., Servis C., Naveiras O., Perreau M., Descatoire M.	
	Write and Defend Grant Proposal, prepare Journal Club <i>Rédaction et défense d'une demande de subside, préparation d'un journal Club</i>	- 2 -	Luther S.	
	Bioinformatics <i>Bioinformatique</i>	2 - 4	Gfeller D.	
	Biostatistics <i>Biostatistiques</i>	2 - 13	Robinson M., Schütz F.

Metabolism and Human Health

Métabolisme et santé humaine

Responsible: Widmann C.

At the end of the course the students will be able to:

- Mobilise theoretical knowledge on the mechanisms regulating the metabolism and their disorders (diabetes, obesity, etc.).
- Propose research approaches using interdisciplinary approaches such as genomics, transgenic or knockout animal models, integrative physiology or clinical investigations.

MODULE 3

STEM CELLS AND METABOLISM

Marlen Knobloch

C	Obl	English	6
S			
S	Obl	English	2
S			

N: Master

P: Knowing the major cellular metabolic pathways

O: This course will provide a general introduction to stem cells and will cover recent research work on how stem cell metabolism influences stem cell function and behaviour.

C: The course will cover the following questions: what are stem cells, what type of stem cells exist, where do they come from, where do they reside, use of stem cells in research and therapy, metabolic requirements of stem cells and metabolic regulation of stem cells. A 2h seminar will be dedicated to student presentations of 2 selected papers in the stem cell metabolism field.

B: le support du cours (Pdf) sera disponible sur myUNIL, publications et sites Web sur le thème des cellules souches et plus particulièrement sur leur métabolisme seront fournis avec le support du cours.

Neuroscience Neurosciences

**Responsibles: Volterra A.
Cardinaux J.-R.**

At the end of the course the students will be able to:

- Mobilise theoretical knowledge about the physiological, pathological and medical aspects of selected domains of neuroscience such as nervous system development, sensory functions, neuron-gland interactions, synaptic functions, neuronal death and tissue repair, psychiatric neuroscience.
- Use advanced research techniques to study the physiological function of the nervous system or neuropsychiatric diseases in animal models or in humans.
- Systematically analyse fundamental and clinical problems and experimental approaches in neuroscience.

MODULE 3

Courses / Enseignements	Hours per semester			Teaching Staff	ECTS Credits
	C	E/S	PW		
Introduction to Clinical Medicine <i>Introduction à la médecine clinique</i>	16	-	6	Bonny O.	
Brain Development <i>Développement du cerveau</i>	16	2	2	Hornung J.-P., Cardinaux J.-R., Arsenijevic Y.	
Introduction to Psychiatric Neuroscience <i>Introduction aux neurosciences psychiatriques</i>	20	-	-	Do K., Klauser P., Steullet P., Preissmann D., Kolly S., Martin J.-L., Cardinaux J.-R., Magara F., Hachaichi M.	
Modulation of Synaptic Transmission <i>Modulation de la transmission synaptique</i>	14	2	-	Fasshauer D., Lüthi A., Stoop R., Pralong E., Varoqueaux F.	
Neuron-glia Biology <i>Biologie neurones-glia</i>	18	2	-	Volterra A., Pellerin L., Bezzi P., Paolicelli R., Tenenbaum L.	
Neuronal Death and Repair in the Central Nervous System <i>Mort neuronale et réparation dans le système nerveux central</i>	16	-	-	Toni N., Truttmann A., Widmann C., Courtine G., Déglon N., Hirt L., Brunet J.-F.	
Sensory Functions <i>Fonctions sensorielles</i>	24	-	-	Hornung J.-P., Broillet M.-C., Matusz P., Décosterd I.	
Write and Defend Grant Proposal, prepare Journal Club <i>Rédaction et défense d'une demande de subside, préparation d'un journal Club</i>	-	2	-	Cardinaux J.-R., Volterra A.	
Biostatistics <i>Biostatistiques</i>	2	-	13	Robinson M., Schütz F.

N: Master

P: Basic knowledge of neurobiology and of cell biology.

O: Understand the roles of neuronal death occurring in normal development and the factors which determine it.
Understand the various cellular mechanisms of neuronal death, active in both normal and pathological situations.
Understand the roles of neuronal death in various pathological situations including cerebral ischemia, Parkinson's disease and motoneuron diseases.

C: Cell death: introduction, history and typology

Pathways of apoptosis

Trophic influences and neuronal death

Neuronal death in development and its regulation

Excitotoxicity, its signalling pathways and neuroprotection against it

Cerebral ischemia and its treatment

Alzheimer's disease

Parkinson's disease

Pharmacology and Toxicology *Pharmacologie et toxicologie*

Responsible: Broillet M.-C.

At the end of the course the students will be able to:

- Mobilise knowledge from a physiological point of view on the functioning of five major classes of drugs (anti-infection, anti-cancer, neurological, cardiovascular and hormonal)
- Acquire a current vision of the issues of pharmacogenetics, personalised medicine and pharmacovigilance.
- Critically analyse and present the practical steps of drug development, pharmaceutical industry and the drug-market policy.
- Interact with scientists and professionals from different backgrounds to learn and practice the various steps involved in the identification of a toxic substance, from the discovery of its mechanism of action to the press release and risk management.
