The Seeds of the Earth, the Vavilov Institute

Photographs by Mario Del Curto

→ Essential reading on the preservation of food plants and the role played by seed banks.

→ The first photographically illustrated publication on the Vavilov Institute, which preserves and regenerates the oldest varieties of food plants in the world.

→ A journey to the heart of the Vavilov Institute in Saint Petersburg and its research stations throughout Russia.

→ The rediscovery of one of the XX century's greatest explorer/scientists whose memory was voluntarily erased for many years.

→ The story of a man who dedicated his life to fighting famine in Russia and throughout the world.

→ He died in the depths of a prison, a victim of Stalin's purges

“The Harvester of life”, “the universal ethnobotanist”, “the twentieth century Galileo”
His knowledge, tenacity and eloquence still echo in the corridors of the Institute which bears his name in Saint-Petersburg and his spirit still inspires the hundreds of researchers pursuing his work.

He had foreseen the disappearance of plant biodiversity and, in a few decades of study and travel throughout the world, had found the means to save it. For political and ideological reasons, Nikolai Vavilov was condemned to die of hunger in the dungeons of a prison in the USSR. His memory, on both sides of the iron curtain, began to fade into oblivion.

100 years after Vavilov's first expedition, the photographer Mario Del Curto returns in his footsteps. Over four years he has met those, who, in the face of immense difficulties, continue his work of prospection, selection and preservation of our planet's food-producing seeds.

unprecedented story of his journey to the heart of the Vavilov Institute and its twelve research stations. Contributions by international specialists shed light on the immense significance of the work undertaken by Vavilov and his successors.
