

Séminaire UNIL - Brocher

Ethos - Plateforme interdisciplinaire d'éthique et l'Interface sciences-société de l'UNIL, en collaboration avec la Fondation Brocher et l'Unité d'Éthique du CHUV, ont le plaisir de vous inviter au séminaire:

The role of emotion in communicating with seriously ill patients

Dr. Robert Arnold, MD

University of Pittsburgh, Section of Palliative Care and Medical Ethics

Dr. Anthony Back, MD

University of Washington, School of Medicine - Division of Oncology

Recent psychological research emphasizes the importance of emotions in the decision-making process. In this session, Dr. Arnold and Dr. Back will describe two of their projects that focus on the interface of communication, decision-making and emotions:

- An empirical study using an interactive educational program to improve oncologists' ability to respond to patient's emotions and the impact of the intervention on patient outcomes.
- A qualitative study of patients "thinking aloud" as they listen to audio-recordings of oncologists talking to patients about goals of care.

Mardi 12 février 2013, 12h30-13h30

Salle de séminaire 15 (6015)

CHUV, Bugnon 21, Niveau 6

Entrée Libre (conférence en anglais)
