SEMESTER

Sp	Spring
A	Autumn

The Master program has a normal duration of 3 semesters and comprises 90 ECTS :

- 15 ECTS : Module 1 (Compulsory courses + Optional courses)
- 15 ECTS : Module 2 (First step project)
- 15 ECTS : Module 3 (Compulsory courses + Optional courses)
- 45 ECTS : Personal research project (Master thesis)

Training objectives are available in its programme regulations.

Specific training objectives are described at the top of each track in the module 3.

Autumn Semester (semester 1)

	Courses / Enseignements	Hours per semester			Teaching Staff	ECTS Credits

	First Step Project <i>Travail d'initiation à la recherche</i>	-	-	280	Broillet M.-C.	15

Abbreviations

C = Course
 E/S = Exercise/Seminar
 PW = Practical Work

Due to the sanitary evolution related to COVID-19, the study plans may be adapted during the semester as follows:

- possibility to switch from one mode of teaching to another (face-to-face <-> distance, synchronous <-> asynchronous, switch to co-modal teaching where it was not initially planned).
- adaptation of evaluation modalities, without inducing derogations from the Study Regulations (oral <-> written, exam <-> validation, individual work <-> group work, practical work <-> theoretical work, face-to-face evaluation <-> online evaluation, etc.).
- alternative or time-shifted modalities for teachings, internships, practical work, fieldworks and camps that could not take place or teachings that could no longer take place in the form initially planned.

Students are invited to consult this document regularly (Study Plan & Evaluation Procedure)

LIST OF COURSES

BIOLOGICAL SECURITY

Patrick Michaux

C	Obl	English	2
A			

N: Master

P: A basic knowledge of microbiology and vegetal science

O: To familiarise future researchers with legislation concerning genetic engineering. In addition, possible biological risks associated to different applications of this technology will be discussed with the help of examples. This teaching is a mandatory prerequisite for First-Step.

C: * Legislation: article 24 of the Federal Constitution; law concerning environmental protection; law concerning epidemics; ordinance on protection against major accidents; Swiss commissions on biological security: notification and registration of projects.
* Biological security in the laboratory: containment; security equipment; technical measures: laboratory construction; standard laboratory (microbiological) practice; classification of biological material: plasmids, microorganisms, cell lines, primary cells; security levels 1-4.
* Release of genetically modified bacteria in the environment: monitoring, survival and dissemination, ecological impact, transfer of genes, containment systems.
* Potential biological risks associated with the use of transgenic plants: dissemination, cross-pollination, gene transfer.
* The problem of recombinant vaccines: vectors, DNA vaccines.
* Somatic genetic therapy I: Illnesses accessible to treatment by somatic genetic therapy, gene transfer methods.
* Somatic genetic therapy II: Evaluation of the biological risk for the patient and his environment.

P: Bachelor in Biology

O: Introduction to the hormonal system. Physiological, pathophysiological and pharmacological aspects

C: 1) Signal transduction by peptide hormones (G protein-coupled receptors, second messengers, protein kinases, genetic pathologies, pharmacological targets).
 2) Receptor-mediated endocytosis (transferrin, LDL, toxins, virus, ligand-targeted therapeutics)
 3) Signal transduction by steroid hormones (mechanism of action, pathologies, pharmacological targets)

B: - Endocrinology: An Integrated Approach.

Nussey, S.S.; Whitehead, S.A. London: Taylor & Francis; c2001

- Molecular Biology of the Cell 4th ed.

Alberts, Bruce; Johnson, Alexander; Lewis, Julian; Raff, Martin; Roberts, Keith; Walter, Peter, New York and London: Garland Science; c2002

MEDICAL MICROBIOLOGY

Onya Opota

C	Obl	English	12
A			
S	Obl	English	2
A			

N: Master

P: Course Virology B.Sc. 5th semester (Kunz) or equivalent

O: This course will provide an overview over medical microbiology at an advanced level. Introductory parts will cover the basic concepts of bacterial, viral, and fungal infections in humans. Selected pathogens will be used to highlight the principles underlying human infectious diseases from the standpoint of the pathogen and the host defense.

C: Outline course Medical Microbiology

Part I Medical Bacteriology (Gilbert Greub, 6 hours total)

This part of the course will first present the concepts of bacterial colonization, of infection and of barriers against invading micro-organisms. The importance of clinical bacteriology for the etiological diagnosis of infectious diseases will be presented, as well as the main diagnosis approaches used. Then, the most important virulence factors implicated in bacterial pathogenesis and in the transmission of pathogenic agents will be presented. These fundamental principles will be illustrated using relevant human pathogens as examples. First, we will present the pathogenesis of some pyogenic bacteria (*Escherichia coli*, *Staphylococcus* spp., *Streptococcus* spp.), highlighting the importance of bacterial toxins and of bacteriophages. Then, we will present some specific aspects of the mode of transmission and pathogenesis of infections due to intracellular bacteria, using as examples the atypical pneumonia and the zoonotic infections. Finally, we will illustrate using mycobacteria some key principles in bacterial pathogenesis including the importance of pathogens evolution and of immune defense.

Colonisation, infection and barriers against invading pathogens (1hour)

Colonisation, physiological flora

Infection and inflammation

Chemical, mechanical, physical and biological barriers

Diagnostic bacteriology (1hour)

Gram and direct examination

Cultures approaches

Bacterial identification

Molecular diagnosis/serology

Pyogenic bacterial infections and toxins (1hour)

Escherichia coli: commensal and pathogen: (ETEC/EPEC/EIEC)

Staphylococcus aureus: virulence factors

Streptococcus, superantigens and bacteriophages

Pneumonia (1hour)

Etiological diagnosis of pneumonia

Pneumococques and other encapsulated pyogenic bacteria

Legionella pneumophila, water and amoebae

Other agents of atypical pneumonia (*Chlamydia* spp., *Coxiella burnetii*)

Zoonotic infections (1hour)

Ticks/fleas/lice: role in the transmission

Rickettsia: pathogenesis and reductive evolution

Bartonella: red blood cells and endothelial cells

Mycobacteria (1hour)

Importance of immune defense mechanisms

Pathogenomic with an evolutionary perspective

Part II Medical Virology

This part of the course will cover fundamental aspects of medical virology and viral diseases in humans. A short introduction will provide a survey of the landscape and outline basic principles of human viral infection and viral pathogenesis. These fundamental principles will then be illustrated using relevant human pathogens as examples. The most important families of human pathogenic viruses will be presented in a general way. From each family, we will select specific viruses that will serve as examples to illustrate fundamental aspects of virus-host interaction and viral pathogenesis in a more detailed manner. A final block will cover virus infections in the central nervous system (CNS) and re-visit the basic principles outlined before to give a synthesis of the highly complex virus-host interaction underlying viral CNS disorders.

Introduction to medical virology (1 hour) Stefan Kunz

Basic principles of human viral infection

Basic principles of innate and adaptive anti-viral defense

Virus infection of the central nervous system (1 hour) Stefan Kunz

Mechanisms of CNS invasion by viruses

Anti-viral immune defense in the CNS

Acute viral infection of the CNS: meningitis and encephalitis

Persistent viral infection in the CNS

Infection of the developing CNS: virus infection in pediatric medicine

Human pathogenic DNA viruses (2 hours) Stefan Kunz

Overview human pathogenic DNA viruses

Poxviruses

Overview poxviruses

Pathogenesis of smallpox

Subversion of innate host cell immunity by poxviruses

Adenoviruses

Adenoviruses as human pathogens

Herpesviruses

Overview human pathogenic herpesviruses

Herpes simplex virus and viral latency

Epstein-Barr Virus: viral latency and cancer

Human pathogenic RNA viruses I (1 hour) Stefan Kunz

Overview human pathogenic DNA viruses

Enteroviruses

Overview human pathogenic enteroviruses

Rhinoviruses and coxsackievirus: viral tropism and pathogenesis

Parvovirus

B: Will be provided for each block.

S	Obl	English	2
A			

N: Master

P: The following metabolic pathway should be known beforehand:

- Glycolysis
- Neoglucogenesis
- Glycogen synthesis
- Fatty acids and triglyceride synthesis
- Krebs cycle

The basic regulation of receptor tyrosine kinases, G protein-coupled receptors, small GTP-binding proteins should also be known.

O: The objectives of this course is to understand the complex aetiology of diabetes by studying the environmental, genetic, and molecular factors underlying the development of the disease

-
- C:
1. Physiopathology, genetic and environmental factors in diabetes.
 2. Epidemiology of and complications in diabetes.
 3. Diabetes: a pancreatic beta cell disease.
 4. Diabetes: an insulin-resistance disease.
 5. Genetics of diabetes

N: Master

P: Practicals performed during the bachelor (molecular biology, genetics, biochemistry, bioinformatics)

O: - An initiation to the work of a scientist
 - Conduct experimental work in research lab (wet bench or in silico)
 - Interpretation of research results
 - Implement basic principles in experimental design (e.g. include the appropriate controls, statistical significance of the results etc...)
 - Present your experimental work in a written report which will be organized like a typical research article (introduction, results, discussion, materials and methods)
 - present your work orally (seminar style)

C: Perform laboratory work for about 12 weeks during the time when the student does not follow theoretical classes. This research project will typically be performed under the guidance of a PhD student or a post-doc from the host laboratory.

Spring Semester (semester 2)

One track among the below proposals / Une filière au choix parmi les propositions ci-dessous :

MODULE 3	Immunology and Cancer		Responsible: Luther S.			
	<i>Immunologie et Cancer</i>					
	At the end of the course the students will be able to:					
	<ul style="list-style-type: none"> Mobilise theoretical and practical knowledge in immunology and oncology. Systematically analyse fundamental and clinical problems in immunology and oncology, starting with diseases related to the immune system or cell transformation, drug development and treatments. Apply basic research techniques in immunology and oncology to solve research questions (proteomics, peptide-based assays, flow cytometry, histology and biostatistics). 					
Courses / Enseignements		Hours per semester			Teaching Staff	ECTS Credits
C	E/S	PW				
Introduction to Clinical Medicine <i>Introduction à la médecine clinique</i>	20	-	-	Wuerzner G.		15

LTK1 MODULE : TRAINING IN ANIMAL EXPERIMENTATION

Marie-Christine Broillet

C	Opt	English	20
S	1.5		
TP	Opt	English	20
S			

N: Master

O: Learning outcomes

To acquire the practical and theoretical skills with laboratory animals as requested by legislation (Swiss ordinance N° 455.171.2, October 1998) to get the accreditation to perform animal experimentation delivered by the Federal Veterinary Office.

This course (20h theory + 20h practical) will be recognized by the Swiss federal veterinary office to undertake animal experiments.

C: What is animal experimentation?

Any interventions in which live animals are used to :

- Test a scientific hypothesis in various fields (behavior, neurology, metabolism, immunology, cardiovascular...)
- Verify the effects of a particular procedure on an animal
- Test a substance (pharmacology, toxicology...)
- Collect or examine cells, organs or body fluids
- Education, training and continuing education

Choosing an appropriate animal model

- Before an animal model is chosen, investigators must consider alternatives to the use of live animals (3Rs)
- Investigators must consider all factors when selecting the best model for research

Who is concerned by this module?

This training module is relevant to all students working with animals during their master project.

Conditions for registration to this module:

- The host laboratory must have permission to work with animals
- Students must be announced to the cantonal veterinary office

CLINICAL RESEARCH MODULE

Grégoire Emmanuel Würzner

C	Opt	English	20

TP	Opt	English	20
S			

N: Master

-
- O: To get acquainted with basic methods in clinical research
- o study design
 - o statistical analysis
 - o ethical considerations
 - o legal aspects
- To know the basic skills for the realization of research protocols on human beings
- o Techniques of asepsis, iv drips
 - o how to react in case of acute adverse effects
 - o basic life support
- To understand the relationships between clinical practice and research
- o cancer
 - o metabolic disorders
 - o neuro-psychiatric disorders

Neuroscience
Responsibles: Cardinaux J.-R.
Neurosciences

At the end of the course the students will be able to:

- Mobilise theoretical knowledge about the physiological, pathological and medical aspects of selected domains of neuroscience such as nervous system development, sensory functions, neuron-gland interactions, synaptic functions, neuronal death and tissue repair, psychiatric neuroscience.
- Use advanced research techniques to study the physiological function of the nervous system or neuropsychiatric diseases in animal models or in humans.
- Systematically analyse fundamental and clinical problems and experimental approaches in neuroscience.

LTK1 MODULE : TRAINING IN ANIMAL EXPERIMENTATION

Marie-Christine Broillet

C	Opt	English	20
S	1.5		
TP	Opt	English	20
S			

N: Master

O: Learning outcomes

To acquire the practical and theoretical skills with laboratory animals as requested by legislation (Swiss ordinance N° 455.171.2, October 1998) to get the accreditation to perform animal experimentation delivered by the Federal Veterinary Office.

This course (20h theory + 20h practical) will be recognized by the Swiss federal veterinary office to undertake animal experiments.

C: What is animal experimentation?

Any interventions in which live animals are used to :

- Test a scientific hypothesis in various fields (behavior, neurology, metabolism, immunology, cardiovascular...)
- Verify the effects of a particular procedure on an animal
- Test a substance (pharmacology, toxicology...)
- Collect or examine cells, organs or body fluids
- Education, training and continuing education

Choosing an appropriate animal model

- Before an animal model is chosen, investigators must consider alternatives to the use of live animals (3Rs)
- Investigators must consider all factors when selecting the best model for research

Who is concerned by this module?

This training module is relevant to all students working with animals during their master project.

Conditions for registration to this module:

- The host laboratory must have permission to work with animals
- Students must be announced to the cantonal veterinary office

CLINICAL RESEARCH MODULE

Grégoire Emmanuel Würzner

C	Opt	English	20

N: Master

-
- O: To get acquainted with basic methods in clinical research
- o study design
 - o statistical analysis
 - o ethical considerations
 - o legal aspects
- To know the basic skills for the realization of research protocols on human beings
- o Techniques of asepsis, iv drips
 - o how to react in case of acute adverse effects
 - o basic life support
- To understand the relationships between clinical practice and research
- o cancer
 - o metabolic disorders
 - o neuro-psychiatric disorders

Pharmacology and Toxicology Pharmacologie et toxicologie

Responsible: Broillet M.-C.

At the end of the course the students will be able to:

- Mobilise knowledge from a physiological point of view on the functioning of five major classes of drugs (anti-infection, anti-cancer, neurological, cardiovascular and hormonal)
- Acquire a current vision of the issues of pharmacogenetics, personalised medicine and pharmacovigilance.
- Critically analyse and present the practical steps of drug development, pharmaceutical industry and the drug-market policy.
- Interact with scientists and professionals from different backgrounds to learn and practice the various steps involved in the identification of a toxic substance, from the discovery of its mechanism of action to the press release and risk management.

-
- C: In this optional course, we propose to the students an in-depth reflection about the emerging issue in toxicology of synthetic drugs, whose consumption increases and alerts in the European countries. The course will offer an integrated vision of key concepts ranging from forensic toxicology (the place of toxicology in the forensic field, the problems in relation to the detection of these new substances, the presentation and interpretation of real cases,...) to social and medical issues (circulation of these substances in Switzerland and in Europe, DarkMarket, seizure by the police, problem of addiction, how to set up an effective warning systems,...). In view of their continuous and rapid evolution, and their increasing diffusion in our country, synthetic drugs represent a very topical "model" and are ideal to introduce students in these reflections. In order to give this global vision, toxicologists and experts in the other fields involved (e.g. a doctor, an addiction expert, an expert in criminal sciences, etc.) will be involved in the teaching.

Spring semester (semester 2) and Autumn Semester (semester 3)

MODULE 4	Courses / Enseignements		ECTS Credits
	Master Thesis / <i>Travail de Master</i>	Thesis Director	45

Due to the sanitary evolution related to COVID-19, the study plans may be adapted during the semester as follows:

- possibility to switch from one mode of teaching to another (face-to-face <-> distance, synchronous <-> asynchronous, switch to co-modal teaching where it was not initially planned).
- adaptation of evaluation modalities, without inducing derogations from the Study Regulations (oral <-> written, exam <-> validation, individual work <-> group work, practical work <-> theoretical work, face-to-face evaluation <-> online evaluation, etc.).
- alternative or time-shifted modalities for teachings, internships, practical work, fieldworks and camps that could not take place or teachings that could no longer take place in the form initially planned.

Students are invited to consult this document regularly (Study Plan & Evaluation Procedure)
