**Dix-neuf nouvelles espèces d'ammonites du Spathien (Trias inférieur) de  
l'Ouest américain (Idaho, Nevada, Utah et Californie): note préliminaire**

Nineteen new spathian ammonite species are described in the present report which follows a preliminary note of Guex et al. (2005) where we have defined 18 new spathian genera found in the western USA (Idaho, Utha, Nevada and California). The stratigraphic ranges of our new species are given in text fig.2 of the above mentioned report. Our new species belong to the following lower Triassic genera :  
Pseudosvalbardiceras (?), Prohungarites, Silberlingia, Bajarunia, Hemilecanites, Arctomeekoceras, Xenoceltites, Nordophiceratoides, Sibirites, Columbites, Hellenites and Svalbardiceras
