Open position:
Postdoctoral project in the field of Stem Cell Metabolism. I am looking for a highly motivated postdoctoral fellow who is/will be able to provide own funding sources to cover his/her salary. We are studying the metabolic regulation of adult neurogenesis in health, aging and disease and the open project focuses on mass spectrometry methods, such as imaging mass spectrometry, to address metabolic changes that occur during aging and under disease conditions in the neurogenic niches of the adult mouse brain.

Excellent candidates with a PhD and a strong background in mass spectrometry should send their application including CV, motivation letter and the names of at least 2 references to Marlen.Knobloch@unil.ch.

The University of Lausanne, Switzerland, provides a high-end, international research environment and the Department of Physiology hosts groups interested in neurobiology and metabolism research, providing a rich environment for collaborations.
